SA1-3.5	Single-item personality measures	29
SA1-3.6	Political measures	30
SA1-3.7	Age and health	33
SA1-3.8	Categorical variables	34
SA1-3.8.1	Demographics	34
SA1-3.8.2	Religion and politics	38
SA1-4	Exploratory analysis of relationships between variables	40
SA1-4.1	COVID-19 related scales and game scores	40
SA1-4.2	COVID-19 related scales and HEXACO scales	41
SA1-4.3	COVID-19 related scales and other personality scales	42
SA1-4.4	COVID-19 related scales and cognitive variables	46
SA1-4.5	COVID-19 related scales and economic games	48
SA1-4.6	COVID-19 related scales and single-item personality measures	50
SA1-4.7	COVID-19 related scales and political measures	52
SA1-4.8	COVID-19 related scales and age and health	54
SA1-4.9	Multiple regression models: Predicting game scores	56
SA1-4.9.1	Motivation	57
SA1-4.9.2	Expectation Purple	59
SA1-4.9.3	Percent H-choices	61

List of Figures

SA1-1	Transmission Game results distribution	22
SA1-2	Transmission Game roundwise results	23
SA1-3	HEXACO scales	25
SA1-4	Other personality scales	26
SA1-5	Cognitive variables	27
SA1-6	Economic Games	28
SA1-7	Single-item personality variables	30
SA1-8	Political measures	32
SA1-9	Age and health	34
SA1-10	Gender	35
SA1-11	Education	36
SA1-12	Income	38
SA1-13	Religion	39
SA1-14	Political party	40
SA1-15	COVID-19 scales	41
SA1-16	HEXACO scales	43
SA1-17	Other personality scales	45
SA1-18	Cognitive variables	47
SA1-19	Economic Games	49
SA1-20	Single-item personality variables	51
SA1-21	Political measures	53
SA1-22	Age and health	55

SA1-23	Postquestionnaire motivation	58
SA1-24	Postquestionnaire expectation percent purple	60
SA1-25	Postquestionnaire expectation percent H-choices	62

List of Tables

SA1-1	Error count frequencies in comprehension check	24

SA1-1 Data preparation

SA1-1.1 Packages and dataset

This document was prepared in Overleaf, as an Rtex file implementing knitr. Any output is generated by R during compilation, and can thus be replicated by entering the same commands referencing the same dataset. Overleaf's R version and selection and versions of packages are not under the user's control. This section demonstrates the R version and the list of packages used for calculations and output generation. <https://cran.r-project.org/web/packages/psych/psych.pdf>

Figure SA1-2

Transmission Game roundwise results: error bars mark the 95-percent CI for percentages

SA1-2 Exclusion of participants and sample selection

A total of 131 participants started the task. Only 106 participants entered the study: Two participants were flagged due to a suspicious IP-address (possible proxy-use or VPN server). Both results were obtained by two independent IP-checkers. Three participants did not respond to the attention check questions, 20 participants failed at least one of the two checks in the beginning and did not enter the study. Of those participants who started, 4 stopped their participation before the game and during the game instructions, 2 did not continue after having completed the game. We analyzed the data for data quality after 100 participants had completed the game, focussing on the number of errors in comprehension checks: Two participants had at least double the number of errors in comprehension checks than the highest number observed in the 98 remaining participants, namely 50 errors and 71 errors, which indicated a very low degree of attention. This degree of attention was considered insufficient, even allowing for the fact that the survey demanded correct responses to proceed. These two cases were thus replaced by two additional participants (bringing the initial total to 133), collected after this inspection. The number of errors in the remaining sample is summarized in Table SA1-1. For study 2, a cutoff of 25 errors was hard-coded into the survey so that participants surpassing 25 errors were not able to start the game. This eliminated the researcher's degree of freedom that was admittedly still present in Study 1 (we decided against excluding the borderline case, namely the participant with 25 errors in Study 1).

Table SA1-1*Error count frequencies in comprehension check*

SA1-4.9.1 Motivation

Five questions were answered on a scale from 1–5: Strongly disagree—Disagree—Neither agree nor disagree—Agree—Strongly agree.

- **Post1:** I wanted to make as much bonus money as possible.
- **Post2:** I wanted to make more bonus money than other players.
- **Post3:** I felt responsible for other players.
- **Post4:** I wanted to make other players switch color.
- **Post5:** I did not care at all what happened in this game.

```
